Recent advances in carbohydrate synthesis Obtaining pure and well-defined carbohydrate-based pharmaceuticals asks for efficient chemical syntheses. Besides implementation of automated methods in the synthesis of oligosaccharides [14 , 15], methodological progress in carbohydrate chemistry has focused on novel protecting groups and glycosylation methods leading to increased yields and selectivities [14 , 16].

Since its inception in 1945, this serial has provided critical and informative articles written by research specialists that integrate industrial, analytical, and technological aspects of biochemistry, organic chemistry, and instrumentation methodology in the study of carbohydrates.

Advances in Carbohydrate Chemistry and Biochemistry

to deal with several different carbohydrates in the same product, and it is seldom possible to choose one simple or even well characterized carbohydrate. This book deals with all these carbohydrates: monosaccharides and disaccharides, cell-wall polysaccharides, polysaccharides described as gums and hydro-colloids, and starch.
