2. TYPICAL TRANSISTOR CIRCUIT- This is a silicon transistor circuit showing typical voltage values. When the forward base/emitter voltage is 0.6 to 0.7 V, the transistor is silicon. Germanium transistors will have a forward base/emitter bias voltage of 0.2 to 0.3 V This is a silicon transistor because 2.6 base volts minus 1.9 emitter volts equal a forward bias of 0.7 volts indicating a silicon ...

The OD-820 was Maxon's answer to the popularity of the Klon Centaur. While it's not a clone of the Centaur, it still employs the same dual-ganged drive knob concept that gives the Centaur its ability to go from a completely clean transparent boost to an overdrive and an internal charge pump that takes your standard 9 volt power supply and increases the voltage for extra headroom.
