A super cluster of thirteen water icosahedra, showing the tessellation ability. Thirteen complete but overlapping icosahedral clusters form this super-icosahedral structure (an icosahedron of interpenetrating icosahedra; that is, a tricontahedron) containing 1820 water molecules (an outer shell of an additional 360 water molecules is also shown).

Definition of a Cluster and the Clusters. A cluster is a group of the same or similar elements gathered or occurring closely together. In chemistry, a "cluster" is an ensemble of bound atoms intermediate in size between a molecule and a bulk solid. Clusters can be viewed as solids at the nanoscale.

Molecules is pleased to announce a Special Issue dedicated to materials chemistry of boron clusters. Owing their unique steric and electronic properties, polyhedral boranes are attractive structural elements for functional materials such as polymers, dendrimers, ionic liquids, liquid crystals that exhibit luminescent, nonlinear optical, electro ...

The cluster of differentiation 14 (CD14) gene encodes for a multifunctional receptor present in macrophages and monocytes and is involved in various innate immune-system processes ( Ulevitch and Tobias, 1995 ). Moreover, it is located on chromosome 5q31.3, a region that has been associated with asthma in genome-wide linkage studies...

Clusters are aggregates of atoms, molecules, or ions that adhere together under forces like those that bind the atoms, ions, or molecules of bulk matter; because of the manner in which they are prepared, clusters remain as tiny particles at least during the course of an experiment.

In chemistry a water cluster is a discrete hydrogen bonded assembly or cluster of molecules of water. These clusters have been found experimentally or predicted in silico in various forms of water; in ice, in crystal lattices and in bulk liquid water, the simplest one being the water dimer  $(H_2O)_2$ .
