Systems Simulation: The Shortest Route to Applications. This site features information about discrete event system modeling and simulation. It includes discussions on descriptive simulation modeling, programming commands, techniques for sensitivity estimation, optimization and goal-seeking by simulation, and what-if analysis.

In computer graphics and digital imaging, image scaling refers to the resizing of a digital image. In video technology, the magnification of digital material is known as upscaling or resolution enhancement.. When scaling a vector graphic image, the graphic primitives that make up the image can be scaled using geometric transformations, with no loss of image quality.

In numerical analysis, Lagrange polynomials are used for polynomial interpolation. For a given set of points  $(x_i, y_i)$  with no two values equal, the Lagrange polynomial is the polynomial of lowest degree that assumes at each value the corresponding value (i.e. the functions coincide at each point). The interpolating polynomial of the least degree is unique, however, and since it can be arrived at ...

Interpolation should not be used when there isn't a meaningful value of the variable at every point in space (within the region of interest); That is, when points represent merely the presence of events (e.g., crime), people, or some physical phenomenon (e.g., volcanoes, buildings), interpolation does not make sense

En mathématiques, en analyse numérique, l'interpolation polynomiale est une technique d'interpolation d'un ensemble de données ou d'une fonction par un polynôme. En d'autres termes, étant donné un ensemble de points (obtenu, par exemple, la suite d'une expérience), on cherche un polynôme qui passe par tous ces points, et éventuellement vérifie d'autres conditions, de degré si ...
