

### **linear algebra fraleigh and pdf**

In mathematics, a matrix (plural: matrices) is a rectangular array of numbers, symbols, or expressions, arranged in rows and columns. For example, the dimensions of the matrix below are  $2 \times 3$  (read "two by three"), because there are two rows and three columns:  $\begin{bmatrix} a & b & c \\ d & e & f \end{bmatrix}$ . The individual items in an  $m \times n$  matrix  $A$ , often denoted by  $a_{ij}$ , where  $1 \leq i \leq m$  and  $1 \leq j \leq n$ , are called its elements ...

In linear algebra, a nilpotent matrix is a square matrix  $N$  such that  $N^k = 0$  for some positive integer  $k$ . The smallest such  $k$  is sometimes called the index of  $N$ . More generally, a nilpotent transformation is a linear transformation  $L$  of a vector space such that  $L^k = 0$  for some positive integer  $k$  (and thus,  $L^j = 0$  for all  $j \geq k$ ). Both of these concepts are special cases of a more general concept ...

In algebra lineare il polinomio caratteristico di una matrice quadrata su un campo  $\mathbb{K}$  è un polinomio definito a partire dalla matrice che ne descrive molte proprietà essenziali. Il polinomio caratteristico è un oggetto che dipende solo dalla classe di similitudine di una matrice, e pertanto fornisce molte informazioni sulla natura intrinseca delle trasformazioni lineari, caratterizzate ...
