Section V contains a unified theory for creep and plasticity, and pertinent numerical results. Constitutive modeling of cyclic plasticity and creep 109 II. NOMENCLATURE Considerations in the present work are restricted to small strains and infinitesimal deformations. For simplicity, we use a Cartesian system of coordinates x_i , with basis ...

CONSTITUTIVE MODELING OF CYCLIC PLASTICITY AND CREEP

The proposed theory of creep has been developed mainly with the purpose of being used as a basis for solving a specific soil engineering problem, i.e., the bearing capacity of buried footings and anchors. Since the problem is itself rather complex, it was endeavoured to present the creep information in a relatively simple mathematical form.
