Many of the post-genomic approaches linking the genetic association data with other 'omics' layers focus on the use of 'omics'-derived phenotypic data as quantitative traits. The utility of such approaches has been previously applied, by combining genetics and metabolomics, in plant functional genomics [26].

Post-genomic Approaches in Cancer and Nano Medicine Full Description : "Understanding the molecular mechanisms of cancer is the key for transforming cancer medicine. A substantial proportion of human genes show alternative splicing and mis-regulation of Pre-mRNA splicing is seen in several cancers.
