Hydraulic engineering as a sub-discipline of civil engineering is concerned with the flow and conveyance of fluids, principally water and sewage. One feature of these systems is the extensive use of gravity as the motive force to cause the movement of the fluids. This area of civil engineering is intimately related to the design of bridges, dams, channels, canals, and levees, and to both ...

The Hydraulic Ram Pump, Hydrum, or simply a Ram Pump is a pump that uses the water hammer W effect from built up water pressure. Using this pressure that has been created by a water source above the pump, it is able to lift water to an elevation higher than the pump.

August 10, 2018-- Static testing is a particularly important aspect of experimental rocketry. Whether testing a new or modified motor design, or developing a new propellant, static testing is an "acid test" that provides priceless data that allows us to assess (sometimes dramatically) the fruit of our efforts.
